EDUCATION

Eastern University

Expected July 2026

Master of Science, Data Science | GPA: 3.95

Relevant Coursework: Statistical Modeling, Data Manipulation & Visualization, Business Analytics, Machine Learning/AI, Introduction to Statistical Modeling (R), Data Analytics in R

Hofstra University

May 2025

Bachelor of Science, Life Sciences | GPA: 3.54

Relevant Coursework: Statistics, Pharmacology, Biology, Chemistry, Molecular Biology, Genetics, Medicine, Physical Exams and Diagnostics

TECHNICAL SKILLS

Languages & Tools: Python (Pandas, NumPy, Matplotlib, Statsmodels), SQL, R, Excel, Tableau, Power BI

AI & Automation: Claude API, prompt engineering, AI-assisted analysis, workflow automation

Data Analytics: ETL pipeline development, logistic regression, data validation, multi-source integration, visualization

Domain Knowledge: Healthcare and pharma datasets, HIPAA compliance, prior authorization workflows

Certifications: Oracle Cloud Infrastructure 2025 AI Foundations Associate

EXPERIENCE

STEM From Dance

June 2026 – Present

STEM Facilitator

New York, NY

- Teach coding fundamentals including variables, functions, and logic to cohorts of 25 girls in middle school, translating abstract programming concepts into hands-on music production exercises
- Guide students to build original songs entirely through code, sequencing beats and instrument sounds to produce a final performance-ready piece

CVS Pharmacy

January 2024 – Present

Pharmacy Technician

Rockville Centre, NY

- Investigate prior authorization denials and insurance escalations daily in a high-volume HIPAA-regulated environment, tracking how formulary restrictions and data discrepancies directly affect patient outcomes
- Manage accurate data entry and multi-system record verification across patient and insurance databases, proactively resolving discrepancies before they reach dispensing
- Explain complex insurance decisions and medication information in plain language to diverse patient populations

Regeneron Pharmaceuticals

2019 – 2021

Research Program Fellow

Tarrytown, NY

- Completed a competitive two-year research fellowship, conducting hands-on laboratory research in year one and transitioning to data analytics on clinical dosing trial datasets in year two
- Performed trend and variance analysis on biological and environmental datasets to support predictive modeling and product decisions
- Communicated findings through structured reports and presentations to non-technical leadership

PwC AI Externship Sprint | Extern

July 2026 – August 2026

Remote

- Completing focused training in prompt engineering, AI-assisted analysis, ethical AI use, and human-AI collaboration workflows

PROJECTS

Student Engagement Analytics Pipeline

January 2026 – March 2026

Eastern University Micro-Internship

- Identified a university posting seeking data management help, independently proposed a solution, and was selected and compensated to execute the project
- Built a Python-based ETL pipeline and self-updating Excel dashboard replacing a fully manual end-of-semester process, reducing processing time by an estimated 80%
- Surfaced demographic engagement trends beyond original project scope and documented the full system so non-technical staff could maintain it independently
- Deliverables adopted for ongoing use across future semesters by university leadership

Preventive Care Gap Analysis

2026

Independent Project

- Built an end-to-end Python analytics pipeline using MEPS public health survey data to analyze preventive care outcome variations across 22,431 records and multiple demographic segments
- Applied logistic regression to isolate statistically significant variables, produced 7 publication-ready visualizations, and delivered a consulting-style scorecard translating findings into strategy recommendations
